## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Franca in view of Birang et al.

Franca teaches measuring the height of a polishing pad and increasing a rotational speed of the dresser if the surface of the polishing cloth is higher at an inner circumferential region of the polishing pad than at an outer circumferential region, lowering the rotational speed of the dresser if the surface of the polishing cloth is higher at an outer circumferential region than at the inner region, increasing a ratio of the rotational speed of the turntable to a rotational speed of the dresser if the surface of the polishing cloth is higher at an inner circumferential region of the polishing pad than at an outer circumferential region and lowering a ratio of the rotational speed of the turntable to a rotational speed of the dresser if the surface of the polishing cloth is higher at an outer circumferential region than at the inner region, (col. 5, lines 21-63). Franca teaches all the limitations of the claims except for measuring the height of a surface of the polishing cloth at radial positions of the polishing cloth in a radial direction thereof. Birang teaches measuring the height of a surface of the

Art Unit: 3723

polishing cloth at radial positions of the polishing cloth in a radial direction thereof, (col. 11, lines 45-50). It would have been obvious to one having ordinary skill in the art at the time the invention was made, to measure the height of the surface area at radial positions of the polishing cloth, as taught by Birang, in order to enhance the measuring efficiency.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shantese L. McDonald whose telephone number is (703) 308-8722. The examiner can normally be reached on 8:00 a.m. - 4:30 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Hail can be reached on (703) 308-2687. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
